

Instant Whey Protein Isolate (WPI)

Production Definition:

Instantized Whey Protein Isolate is obtained by the removal of sufficient non-protein constituents from whey so that the finished dry product contains not less than 90% protein and has been instantized or agglomerated for greater dispersibility. Instant WPI is produced by physical separation techniques such as precipitation, membrane filtration and/or ion exchange. The acidity of Instantized WPI may be adjusted by the addition of safe and suitable pH adjusting ingredients. Instant WPI for human consumption complies with all provisions of the U.S. Federal Food, Drug, and Cosmetic Act.

Typical Compositional Range (Percentage)¹

Protein	92.0
Lactose.....	0.5
Fat	1.0
Ash.....	2.0
Moisture.....	4.5

Microbiological Analysis

Standard Plate Counts.....	<30,000/g
Coliform.....	<10/g
Salmonella.....	negative
Listeria.....	negative
Coagulase-positive	
Staphylococci.....	negative

Other Characteristics

Scorched Particle Content.....	7.5 – 15.0 mg
Color.....	cream
Flavor.....	bland, clean

Ingredient Statement

“Instant Whey Protein Isolate (_____% protein)”. The present of protein is declared in 2% increments or as actual percentage, provided an analysis of the product is supplied.

Production Applications and Functionality

General protein supplement, protein functionality for gelation (yogurts, pudding), whipping (topping and filling), water-binding (meat, sausage), and emulsification (ice cream, margarine, mayonnaise)

Storage & Shipping

Product should be stored and shipped in a cool, dry environment with temperatures below 80°F and relative humidity below 65%. Stocks should be rotated and utilized within 9 months to 1 year.

Packaging

Multiwall kraft bags with polyethylene inner liner or other approved closed container. (i.e. “tote bins,” etc)
